# Enjoy a Real Bath with Safety and Independence

*Aquasure bathtubs give you a real bathing experience. Stretch out, relax, and enjoy... bathing as it was meant to be.*

Toll-Free: 1-866-404-8827

Aquassure's universal design bathtubs are unlike a walk-in bath; you can stretch out your legs and relax in a full-size, deep soaker tub, immersing your back and shoulders in warm soothing water.

They are accessible from wheelchairs, walkers, and lifts. They are the same five foot length as a standard bathtub for trouble-free installation.

Safe, accessible, full-size baths designed for everyone. Elevated, so you are always supported, and don't have to climb up and down.  
***It's like getting in and out of a bed.***

Aquassure's accessible baths were developed with collaboration of two universities and several health organizations. We are proud of our bath systems and stand behind them.

**All tubs come with a complete warranty package, including a lifetime replacement warranty on the door seal.**

Our team of knowledgeable customer service specialists will work with you to find the best solution for your individual bath needs.  
**Call us now for a FREE brochure and information package. Toll Free: 1-866-404-TUBS (8827)**

- Hygienic 15-jet air massage system with multi-speed heated jets.
- Combination heated air- and water-jet systems.
- Colour and finish options for cabinet.
- Automatic ozone disinfection system (no chemical additives) for water jets.
- Seatbelt and Harness System
- Ergonomic door-handle

# Fixtures

Our Economy Bathtub, allows you to choose your own wall or deck mount fixtures.

Aquassure's Basic System bathtubs come pre-installed with chrome lever-style ADA Compliant controls with a handshower.

Aquassure Safety Plus bathtubs come pre-installed with premium anti-scald, high-flow valves. This includes easy-to-use ADA-Complaint lever handles.

# Valves

Aquassure's Safety Plus bathtubs include a 3/4-inch thermostatic temperature-control, anti-scald safety valve. Standard bath and shower fixtures use 1/2-inch valves, while Aquassure systems use enhanced 3/4-inch chrome valves. The bather must adjust the hot and cold mix with every bath. With a thermostatic valve, the temperature is pre-set and the valve will automatically go to that temperature again when the water is turned on.

Our 3/4-inch thermostatic valve allows up to two and a half times the flow of a standard system- up to 18 gallons per minute, filling your tub more quickly.

Thermostatic valves help to prevent scalding injuries by controlling the temperature of the water filling the tub. This is especially important for those who have decreased sensitivity to hot and cold due to stroke, diabetes or nerve damage.

*Faster fill and drain times with consistent temperatures for a better, safer bathing experience!*

Independent & Assisted Living

# Grab Bars

To help you manoeuvre in and out of the bathtub in safety and comfort, Aquassure bathtubs include four preinstalled ADA-Compliant grab bars at just the right height.

## *Optional Extension Handle for the Door*

An Optional extension handle is available for the door handle. This is recommended if the bather has poor arm and/or shoulder mobility and/or low strength. This provides greater access and leverage for both arms.

**Toll-Free: 1-866-404-8827**

# Door and Seal

- Only the Aquasure bathtub comes with a patented sliding door.
- Sliding door doesn't get in the way of legs, walkers or wheelchairs.
- Opens and closes by sliding securely in its track.
- Door latches automatically when closed- lift up the handle to release.
- No bulky levers or drop pins to remember.
- Easy-glide door is simple and easy to open when tub is empty- very little effort is needed.
- Unique seal design uses water pressure to increase seal integrity, preventing leaks and accidental opening.
- Door track has secondary drain as a backup- no spills on the floor.
- If renovating a small room, the sliding door gives extra clearance.

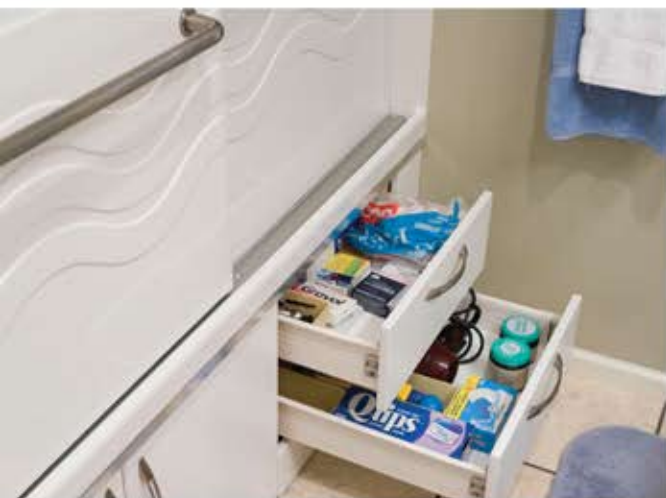

Lifetime residential warranty on seal.  
(10-years commercial)

*Our door was tested with 20,000 cycles of opening and closing, then filled with water, and did not leak!*

# Cabinet Base

The Aquasure bathtub sits on top of a cabinet base.

- Every Aquasure bathtub includes a cabinet base with two drawers and a cupboard.
- The cabinet raises the tub doorway to 20-inch seat height, making entry easier from a wheelchair or walker.
- The predrilled frame is made of water-resistant, laminated 5/8" wood, not particle board, so it will not swell or warp from moisture.
- The cabinet provides handy storage space for soaps, towels and other bathroom articles.
- Cabinet doors are spaced so that a wheeled lift may be used to assist the bather in and out of the bathtub, if needed.
- High quality European hinges and durable door slides are included.
- Hardwood veneer and bamboo upgrades are available unstained or in a wide range of finishes to custom match your existing décor and cabinetry.

## Custom cabinets are available by special order:

- Cabinet fronts can be custom-matched to the profile of existing cabinetry.
- Tub can be ordered without cabinet fronts, to allow for on-site cabinet matching or tile front.
- Tub can be ordered without cabinet base and the base can be custom-built on-site.

Independent & Assisted Living

# Hydrotherapy Massage System

- Our 7-jet hydrotherapy water jets increase the benefits of water immersion by circulating the water and providing increased stimulation to the bather's tissues.
- Surface agitation helps clean the skin, promoting hygienic benefits.
- Stimulation of the skin and underlying tissues promotes tissue healing, circulation, and nerve-tissue stimulation.
- Hydrotherapy relief from pain and stiffness, restoring flexibility and wellness.
- Rotational massage jets provide relaxing massage benefits at foot and low-back locations.
- Aquassure uses the Syllent™ water pump, the quietest bath pump in the world, for a serene spa experience.
- The Syllent™ water pump heats the circulating water to maintain water temperature and uses less energy than a traditional pump.
- Electrical system is triple-insulated for safety and performance.

# How to get into the Aquassure Bathtub

Toll-Free: 1-866-404-8827

**Aquassure**  
Accessible Baths

Simply sit down in the doorway, as in a chair. Slide back as if you were getting into bed. Use the handy grab bars to help slide backwards. Your legs can slide in without any strain or bending. A little soapy water helps to slide without friction. Your legs aren't needed to push yourself in. Slide the door shut- it seals by itself. You are now ready to fill the tub and enjoy.

If you can get in and out of bed, Aquasure tubs can work for you, even if you are in a wheelchair!

Our universal design baths are made for the full range of mobility challenges- from those with knee issues, to those requiring assistance with a lift.

You can't fall in an Aquasure bathtub because you are always fully supported!

*Take Action Today to Reduce the Risk of Falls!*

# Heated Air-Jet Massage System

- Gently heated bubbles massage your body and circulate the water.
- 300-Watt integrated heater blows heated air into the water, not cold air. This maintains water temperature and prevents rapid cooling of the bath water.
- 15-jet air system is perfect for use in assisted living and long-term care homes.
- Promotes relaxation and eases tension.
- Air jets have dual check-valves for hygienic backflow prevention.
- Automatic purge cycle to ensure there is no moisture or contamination in the system.
- Allows trouble-free use of bath oils and additives.
- The variable-speed system can be set for a vigorous stimulating bubble massage down to a calming, gentle, warm-air circulation.

**Toll-Free: 1-866-404-8827**

# Ozone Disinfection System

Aquasure is pleased to offer a chemical-free ozone system that sanitizes the equipment without exposing the bather to irritating chemical residues. The O3 System will sanitize the water jet system after each and every use.

The O3 System minimizes the risk of cross-contamination infections.

After a bath cycle, the O3 System automatically activates a one-hour delay timer for the sanitizing process. The system will start the cleaning process for a period of 15 minutes to sanitize the jet system.

There is a manual override if you wish to use the tub while the disinfection system is running.

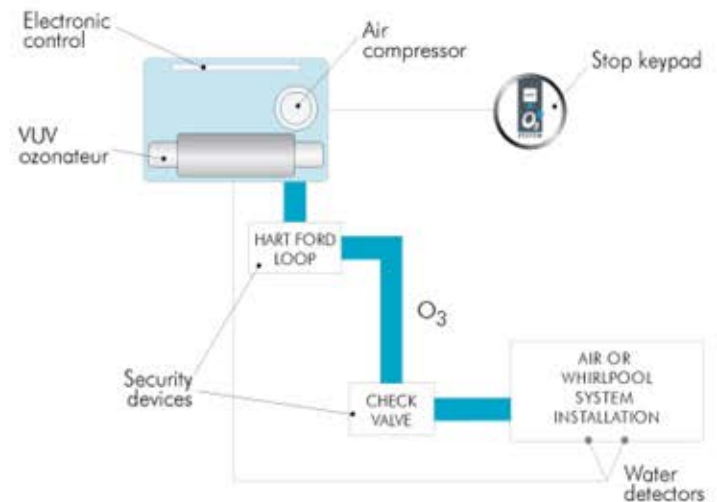

Ozone will eliminate all known disease-causing microorganisms such as bacteria, viruses, yeasts, mould, mildew and cysts. It breaks down harmful chemical residue and dissolves minerals.

You will not need expensive and potentially harmful cleaning products for this disinfection system.

The system is not only safe for the environment, but is also gentle on bathtub components.

This system is a recommended add-on to hydrotherapy jet systems, especially in multi-bather and facility situations.

# The Aquassure Difference

## *Aquassure Slide-In Baths vs. Door Cut & Walk-In Tubs*

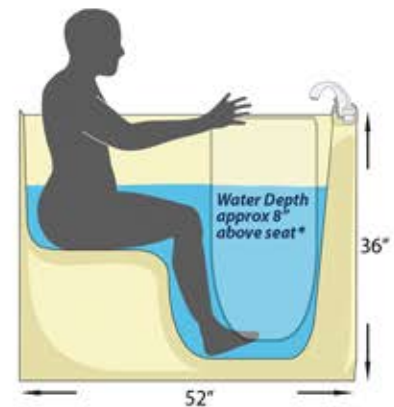

- Uses less water, for faster fill and drain time.
- Less water eliminates the need to replace your hot water tank or worry about overflowing your septic system.
- Full size, deep soak spa bath benefits.
- Wheelchair access without assistance.
- Less water use & faster fill time than most walk-ins!
- You can stretch out to soak and soothe your neck and shoulders, for a real bathing experience, instead of a sitting in a chair style bath.

**Aquassure** Bath System

**Standard Tub  
with Door Cut & Bench**

**Typical Walk-in Bath**

## *From chair to tub with ease*

Independent access from wheelchairs. Wheelchair users who have upper body strength can do a seat-to-seat transfer or use a transfer board.

## Fully Accessible

Our tubs reduce bending and strain for caregivers. Bath systems can be installed in an enclosure or with open sides for increased caregiver access. This is an example of a 2-sided enclosure enabling easy caregiver access for hair washing.

[www.aquasure.com](http://www.aquasure.com)

Accessible Baths for  
Independent & Assisted Living

## Clearance for lifts

For individuals requiring more assistance, the cabinet base provides clearance for a wheeled lift.

## Support Harness & Seatbelt

Some bathers have difficulty remaining in a seated position in the bathtub due to core weakness or paralysis. Aquasure has an optional 4-point shoulder support as well as a seat belt harness that the bather can use to secure themselves in place once in position for bathing.

[www.aquasure.com](http://www.aquasure.com)

Accessible Baths for  
Independent & Assisted Living

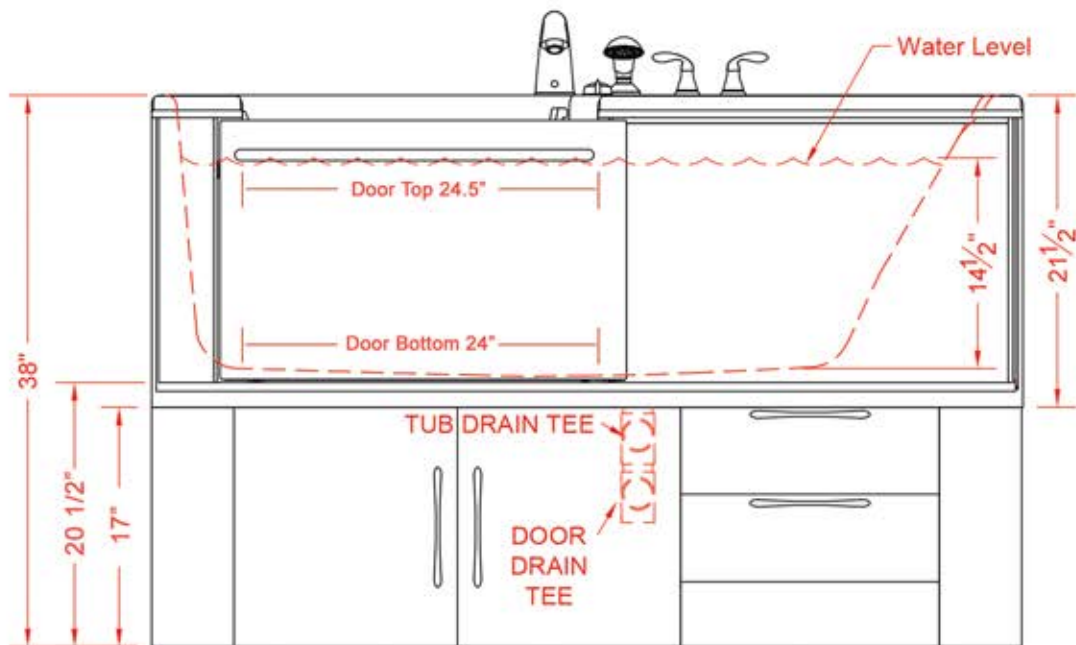

The **Left** sliding door, pictured above, is the most requested Aquasure bath door configuration. This puts the water controls and hand shower at the bather's right hand. Most people are right handed, and the majority of stroke survivors are affected in their left sides.

## Left vs. Right Door Bathtub

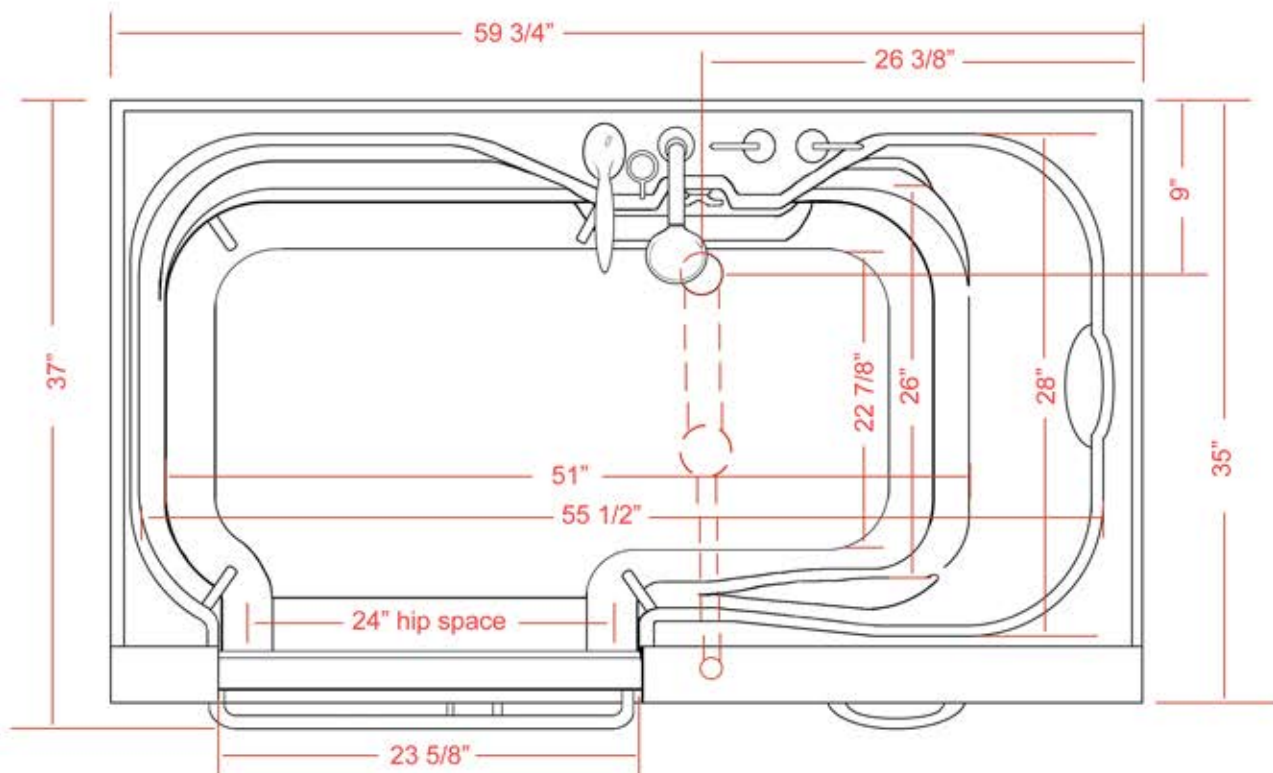

The **Right** sliding door, shown below, is often used in a location where other existing fixtures and equipment may get in the way of a left door. The water controls and hand-shower is at the bathers left-hand side.

## Aquassure front-view dimensions

## Aquassure top-view dimensions

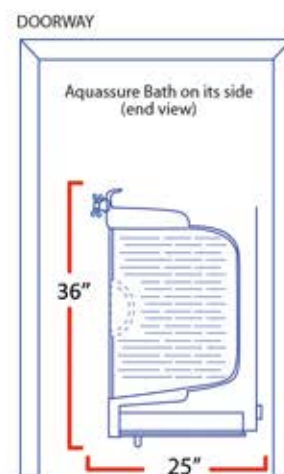

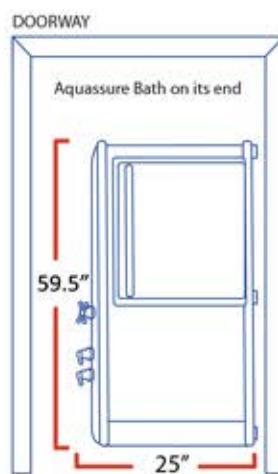

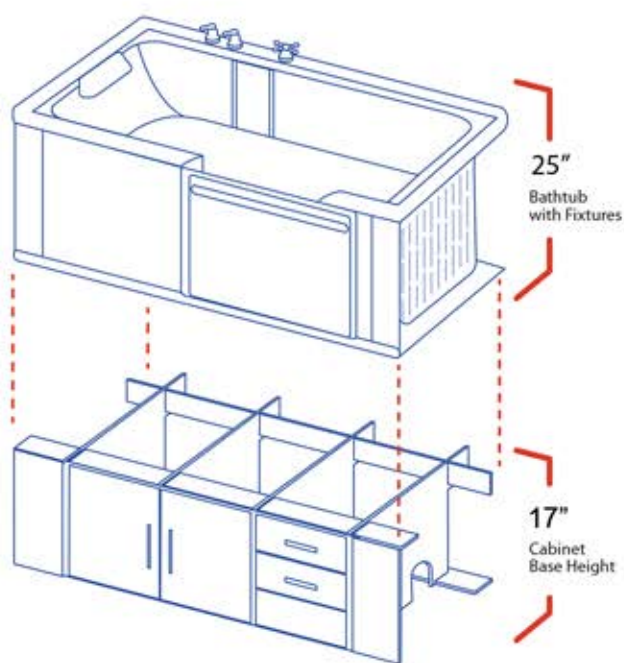

# Installation

Aquassure bathtubs are easy to install. The plumbing is pre-installed on the bathtub. (The tub is shipped in a hand built crate on a pallet and delivered to your curbside.) The cabinet base comes flat packed. Once unpacked, the tub can easily be carried through narrow hallways and doorways. Many competitor tubs are too wide to fit through standard doorways, so installation is difficult when renovating an existing home, but Aquassure tubs fit through a 25" doorway.

The cabinet base provides clearance for connection of hot and cold water lines and the drain. The tub can easily hook-up to the drain and water intake lines anywhere in the cabinet base area. Our Basic and Safety Plus systems include 5-foot flex hoses for added convenience.

# Better Hygiene

Aquassure bathtubs provide full access to the body for cleaning and better hygiene. In a shower or walk-in bath it can be hard to reach your feet and legs. *"It's hard to wash the important parts when you're sitting on them!"*

***Aquassure bathtubs ensure ease of access and bather comfort.***

## Hydrotherapy Benefits

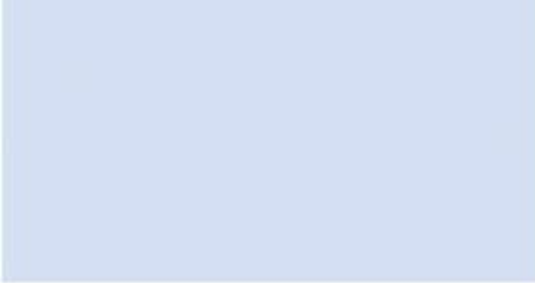

Hydrostatic pressure from immersion (water pressure) has many proven benefits:

- Promotes relaxation and wellness, calming nerves and helping you sleep better.
- Loosens stiff joints, eases muscle tension and reduces pain to help maintain mobility.
- Stimulates circulation in the arms and legs.
- Improves blood and lymphatic circulation.
- Stimulates the nervous system and circulation, which can calm the heart, lungs, and stomach and improve hormonal and immune systems.

People with circulatory disorders related to diabetes, strokes, multiple sclerosis, Raynaud's syndrome, bedsores and the like benefit from increased circulation resulting from immersion in water. These benefits can be increased by the use of air and/or water jets or manual massage by a caregiver.
